The screenshot shows a Web of Science article page. At the top, the 'Web of Science' logo and 'Clarivate Analytics' are visible. The article title is 'Systems pharmacology reveals the mechanism of activity of Ge-Gen-Qin decoction in the treatment of LPS-induced acute lung injury in Balb/c mice'. The authors listed are Ding, Ding, Zhef<sup>1,2,3</sup>; Zhong, RX (Zhong, Renxing)<sup>1,2,3</sup>; Yang, YN (Yang, Yanni)<sup>1,2,3</sup>; Xia, TX (Xia, Tianyi)<sup>1,2,3</sup>; Wang, WJ (Wang, Wujing)<sup>1,2,3</sup>; Wang, Y (Wang, Yi)<sup>1,3</sup>; Xing, N (Xing, Na)<sup>1,3</sup>; Luo, Y (Luo, Yun)<sup>1,3</sup>; Li, SY (Li, Shuyuan)<sup>1,3</sup>; Shang, LF (Shang, Lifeng)<sup>1,3</sup>. The journal is 'PHARMACOLOGICAL RESEARCH', volume 156, issue 104759, published in June 2020. The abstract discusses the use of systems pharmacology to explore the effects and mechanisms of GQD treatment in ALL. It mentions that GQD inhibits M1 transcription, improves the bronchoalveolar lavage fluid (BALF) level of lipopolysaccharide (LPS)-induced acute lung injury (ALI), and initially elucidated its molecular mechanism. The abstract also notes that GQD can inhibit ALI by reversing the imbalance of energy metabolism. The article has 72 citations and is in the Web of Science Core Collection.

**摘要**  
Acute lung injury (ALI), a severe and life-threatening inflammation of the lung, with high morbidity and mortality, underscoring the urgent need for novel treatments. Ge-Gen-Qin-Lian decoction (GQD), a classic Chinese herbal formula, has been widely used to treat intestine-related diseases in the clinic for centuries. In recent years, a growing number of studies have found that GQD has a favorable anti-inflammatory effect. With the further study on the viscera microbiota, the link between the lungs and the gut-gut lung axis has been established. Based on the theory of the gut-lung axis, we used systems pharmacology to explore the effects and mechanisms of GQD treatment in ALI. Hypothesizing that GQD inhibits ALI progression, we used the experimental model of lipopolysaccharide (LPS)-induced ALI in Balb/c mice to evaluate the therapeutic potential of GQD. Our results showed that GQD exerted protective effects against LPS-induced ALI by reducing pulmonary edema and microvascular permeability. Meanwhile, GQD can downregulate the expression of LPS-induced TNF- $\alpha$ , IL-1 $\beta$ , and IL-6 in lung tissue, bronchoalveolar lavage fluid (BALF), and serum. To further understand the molecular mechanism of GQD in the treatment of ALI, we used the network pharmacology to predict the disease targets of the active components of GQD. Lung tissue and serum samples of the mice were separately analyzed by transcriptomics and
